

## MicroStation for CAD Management and Administration

### Course Prerequisites

MicroStation V8 XM Edition for CAD Managers

### Duration

2 days

### Designed for

The Administrator Update course is designed to **help experienced administrators** become acquainted with the many changes found throughout MicroStation V8i. The subsequent releases of MicroStation V8i introduced many capabilities that can enhance workflows and operations. You will learn about these new features, with an emphasis on setting up and managing resources with new technologies. Live training courses are very interactive. Students will continually engage with the instructor to ensure a successful learning outcome that includes a course assessment.

### Skills Taught

After completing this course, you will be able to:

- Use the enhanced interface.
- Apply configuration variables and manage resources.
- Use new models, references, raster, and point clouds features.
- Setup and use the improved Project Explorer.
- Create dynamic views in 2D and 3D environments.
- Customize the dynamic views workflow by creating drawing seeds and detailing symbol styles.
- Geo-coordinate project data.
- Publish i-models and view non-graphical business items.
- Setup and use Print Organizer and define print styles.
- Create custom user interfaces, including context menus and using named expressions.

### Course Material Language

English
